Installing the Allegro® 2 undercarriage cover

The cover for the Allegro 2 undercarriage is used for both cosmetic and maintenance purposes. It hides the undercarriage when in the standing position, and can also keep dust off the rope tensioning mechanism.

**Note:** This should be done at the same time you are installing your wheel kit, with the Allegro 2 on its side. Footbar should be installed first.

**TO INSTALL**

1. Apply the Velcro on the flat surfaces of the underside of the carriage frame rails as shown in Figure A. Be sure to clean and dry the face of the carriage frame where the Velcro will be applied. Make sure the Velcro is not rubbing the Reformer frame rails.

2. Install the cover on the Velcro as shown in Figure B. Make sure the cover is not rubbing on the reformer rails.
